

# South Warwickshire CCG

These Mini JSNAs have been produced at district/borough level to provide more localised data and analysis to support future commissioning plans of Warwickshire's Clinical Commissioning Groups (CCG).

## The needs of the population

South Warwickshire CCG area is comprised of the Stratford-on-Avon and Warwick Districts. The combined population of the Districts is 258,500 (mid 2011 estimate), 47% of the total Warwickshire population, making it the largest CCG in the County. South Warwickshire CCG is expected to experience some of the highest rates of population growth within the county, with Stratford-on-Avon District's population projected to see the second highest levels of growth, behind Rugby Borough. The highest rates of growth are among the 65 and over age group and in addition to this; Stratford-on-Avon District has the highest dependency ratio within Warwickshire, explaining the need for focus to be on caring for the frail and elderly.

The health of the population is generally better than the England average and life expectancy in both Stratford-on-Avon District and Warwick District is higher than the national average. Despite this, over the last 12 months the CCG has required the highest total annual expenditure within the Public Health budget, amounting to 47% of the total budget.

Priorities within the CCG consist of improvements to cancer screening, preventing falls, increasing wellbeing factors such as mental health, and healthy lifestyle indicators such as obesity.
